Getting started with HTML Document

1. What do we need first?

   - what we need to get started with html document

2. How to Create new HTML Document

   - how to create and save HTML documents and the HTML file extension.

3. Open or run it

   - how to open or run our saved HTML page

4. HTML Page Structure

   - The page structure of HTML document.

5. Create Simple HTML document

   - An example of simple HTML document

1. What do we need first?

i)   Text editor: text editor is an app that can help us create the document. We can use text editor to write, edit and save codes. For example, we can use text editors like:

- Note Pad,

- Visual Studio Code

I highly recommend you to use Visual studio code. It has so many tools that can help you learn and build faster. And the interface is also nice.

ii) Browser: Browser is an app that can run a website page. We use browsers to show the output of our code.

For example, we can use like:

- Chrome
- Opera Mini

That's all we need to get started with HTML. Now we can move to next step.

2. How to create new HTML Document?

i)   Open preferred text editor
ii)   Create new file
iii)   Save as filename.html (".html" is extension for HTML documents)

3. Open or run it

i)   Open the file from the folder you have saved it in using browser.

4. HTML Page Structure

The page structure of HTML is:

```html
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>
the content goes in here
</body>
</html>
```

- The `<!DOCTYPE html>` declaration defines this document to be HTML5
- The `<html>` element is the root element of an HTML page
- The `<head>` element contains meta information about the document
- The `<title>` element specifies a title for the document
- The `<body>` element contains the visible page content

5. Create Simple HTML Document

i)   Open the file you saved earlier when we learned how to create a HTML file with your text editor.

ii) Put the below code in it

```html
<!DOCTYPE html>
<html>
<head>
<title>My First HTML Page</title>
</head>
<body>

<h1>This is My first HTML page</h1>
<p>I just learned to create HTML simple page. Now I am
going to learn more.</p>

</body>
</html>
```
